

*Complications to consider in class*

1. What if the furnace doesn't have fuel?
2. What if the apartment resident can also open a window?
3. What if there are two roommates?
  - They can both open the window or adjust the thermostat.
  - Do their preferences differ?
4. Let's reframe to consider this from a property manager's perspective.
  - What about installation?
5. Let's consider this from a thermostat/heater manufacturer's perspective.
